SUMMARY

Site Reliability Engineer with around 6 years of experience designing resilient CI/CD pipelines and improving reliability for large-scale distributed systems (serving 100K+ users).

I collaborate closely with engineering teams to reduce deployment friction, improve observability, and ensure systems are stable and scalable in production.

Recently built a benchmarking tool that compares application performance against top competitors to identify latency bottlenecks; details & repo in my cover letter.

SKILLS

Cloud and Networking

AWS, Azure, GCP, EKS, EC2, VPC, IAM, S3, Route 53, Cloudfront, RDS, Disaster Recovery, PostgreSQL, NAT

Infrastructure as Code (IaC)

Terraform

Containers and Orchestration

Docker, Kubernetes, Helm

Monitoring and Alerting

Prometheus, Grafana, Alertmanager, Cloudwatch

Scripting / Automation

Python

CI/CD, gitops

ArgoCD, Github Actions

Version Control

Github

Operating Systems

Linux (Centos, Ubuntu), Windows, Mac-OS

Languages

English

EXPERIENCE

Velocis Systems

Senior Cloud Engineer I - DevOps | Feb 2026 - Current

- Introduced GitOps-based delivery with ArgoCD across multiple Kubernetes clusters, cutting deployment-related failures by 35% and reducing rollout time from 15-20 mins to under 5 mins.
- Built standardized Terraform modules for AWS (IAM, networking, compute), shrinking environment provisioning time from 2 hours to 10 minutes and eliminating configuration drift across teams.
- Overhauled the observability stack (Prometheus, Alertmanager, Grafana), introduced SLO-based alerting, and reduced noisy alerts by ~40%, improving on-call signal quality.
- Led end-to-end root-cause analysis for recurring production outages, publishing runbooks that reduced MTTR from 1.5 hours+ to under 40 minutes.

CodeLogicx

DevOps Engineer | Dec 2024 - Feb 2026

- Built flexible CI/CD pipelines enabling commit-triggered deployments, reducing release cycles from weekly batches to daily small increments.
- Created and optimized Docker images, reducing build time by 25–30% and lowering image size for faster production deployment.
- Automated Jenkins job creation via Groovy DSL, removing 90% of manual job setup and ensuring consistency across teams.
- Automated high-volume operational tasks using Python & Shell scripts, saving the team 10–15 hours/week and reducing human error.

ACS Global Tech

AWS, Consultant | Oct 2022 - Dec 2024

- Deployed an AWS cross-account hub-and-spoke architecture, improving infrastructure security and centralizing network control.

EDUCATION

UEM Jaipur
India

Bachelor of Technology | July 2015 - May 2019
Computer Science and Engineering

PERSONAL PROJECTS

Kubernetes-self-heal-agent (AIOps)

- <https://github.com/debmalya-acharjee/kubernetes-self-heal-agent>
- Docker, MCP Server, Lambda, Python, Prometheus, Alertmanager, Grafana and Ollama.
 - Deployed on a private EKS Cluster

GitOps-eks-platform

- <https://github.com/debmalya-acharjee/gitops-eks-platform>
- The project mentioned above is deployed using argocd.
 - This is used for Continuous Delivery using GitOps.

ACHIEVEMENTS

AWS certification	AWS Certified Solutions Architect - Associate
Acknowledged for Innovation March 2025	For taking initiative regarding GitOps in the team
Star Performer Aug August 2022	For exceptional performance in setting up Modular Terraform IAC process for clients
